

### Relations and Functions Notes

Why are functions important to learn about?!

Thoughts/Questions About Functions

• they are the basis of almost ALL math!

~engineering, accounting, finance, weather, science, technology,...

• Notation:  $f(x)$   
"f of x"

#### Short-Term Goals

(which will help you achieve long-term goals of understanding further concepts in this and future math courses)

~identify function vs. non-function  
~identify domain's range of function  
~create, model with, & analyze functions

1

Examples:

\* CAR:  
input → output  
• keys → engine turns on  
• press brakes → stops

\* COMPUTER  
• flash drive → access to files  
• type "s" → "s" appears  
• "CTRL+C" → copy text  
• right click, copy  
• edit-copy \*multiple inputs can have same output

Non-Examples  
Input → Output  
• type "s" → "s" (not functioning)

• hit brakes → stops windows roll down (NOT functioning)

Each input should produce EXACTLY one output

Remember what you've concluded about functions in terms of input

### Domain and Range

Notation	When to Use	Example(s)

The Union:

### Relations and Functions Class Work

Objective: You will be able to identify whether or not relations are functions, support your identification, and state the domain and range of relations.

In the world of Algebra, there are a few vocabulary terms you must understand in order to grasp mathematical functions!

#### Definitions:

\* Relation: a relationship btwn 2 sets of info  
\* Domain: all of the inputs (x-values)  
\* Range: all of the outputs (y-values)  
\* FUNCTION: when every input has exactly 1 output

Guided Examples: Part 1: Determine whether or not each relation is a function. Part 2: Identify the domain and range of each relation.

#### A. SET OF POINTS

Consider the relation:  $\{(-2,3), (1,8), (0,7), (4,3)\}$

Method 1: Mapping Diagram

Method 2: Vertical Line Test (VLT)

Function: yes

Justification(s):

ex. of non-function

Domain:

Range:

4

B. EQUATION Is the equation  $x = y^2$  a function?

ex. Input  $x=4 \rightarrow 4=y^2 \rightarrow y=2$   
 $y=-2$   
 In Out  
 4 -2  
 NOT a function ex. Input of 4 produces 2 outputs (2, -2)

What is the domain of the relation?

What is the range of the relation?

C. GRAPH

Function: yes / no

Justification: passes VLT each x matches exactly 1 y

Domain:

Range:

5

Now You Try Some!

Part 1 Determine whether or not each relation is a function.

Support your answer! ☺

Part 2: Identify the domain and range of each relation, using ALL appropriate notations.

Function: yes / no

Justification: passes VLT

Domain:

Range:

2.  $\sqrt{x+1} = y$

Function: yes / no

Justification: each input only produces 1 output

$x=4 \rightarrow \sqrt{4+1}=y$   
 $y=2+1=3$   
 $x=9 \rightarrow \sqrt{9+1}=y$   
 $y=4$

Domain:

Range:

3.  $\frac{3}{x-5}$

Function: yes / no

Justification:

every input has 1 output

Domain:

Range:

6

4.  $\{(0,2), (3,2), (7,1), (9,1), (3,8)\}$

Function: yes / no

Justification:

input "3" produces 2 outputs  
 $-7 \rightarrow 1$   
 $0 \rightarrow 2$   
 $3 \rightarrow 8$   
 $9 \rightarrow 1$

Domain:

Range:

5.  $y = |2x + 8|$

Function: yes / no

Justification:

each input has 1 output  
 ID  $x=1$  out  $y=10$

Domain:

Range:

6.

Function: yes / no

Justification:

every x matches only 1 y

Domain:

Range:

7

7.

Function: yes / no

Justification:

most x values have 2 y-values

Domain:

Range:

8.

Function: yes / no

Justification:

does not pass VLT

Domain:

Range:

9. Consider the input output table below.

Input	-15	23	0	12	-3
Output	3	0	8	2	9

a. Choose any value to place in the empty cell so that the table of values satisfies the definition of a function. Explain your choice.

10, 6, -8, 29

b. Choose any value to place in the empty cell so that the table of values does not satisfy the definition of a function. Explain your choice.

23, 0, 12, -15, -3

10. Choose all values that can be placed in the empty cell so that the table of values satisfies the definition of a function.

Input	9	13	28	-12	-2
Output	0	4	-8	4	3

☒ 5

☒ -15

☒ 4

☒ 9

☒ 0

☒ 28

HOMEWORK Part 2: p. 59-60 #12-21, #40-45, 62, and 63

Part 2: p. 59-60 #12, 17, 18, 19, 21 (just state the domain and range of each relation) and #36-39, & 58

**Day 1:**

Complete A if your favorite season is Summer or Winter.

Complete B if your favorite season is Spring or Fall.

A. Create any relation that IS a function. Explain your decision.

B. Create any relation that is NOT a function. Explain your decision.

Write/Draw your function on the front of your post-it note, & the answer on the back. 😊

9

Sep 18-8:32 AM

**Day 2:**

1. Determine whether or not each relation is a function. Then state the domain and range of each.

A.  $\{(-2,4), (-1,3), (0,4)\}$

B.

C. Create any relation that IS a function. Explain your decision.

2. Write any questions you still have regarding functions, domain, and/or range. If you do not have any questions, create a problem that could be solved using any of these ideas. 😊
